

# LAW FIRM USE CASE

## OBJECTIVES

- To enhance the security of internal and external communication and confidential document sharing and approvals.
- To reduce the technology stack from multiple, disparate communication tools to one, ultra-secure platform.

## SOLUTION

Dekko comprises five powerful communication tools on one, ultra-secure, web-based platform that is secure by design. All data is end-to-end encrypted making it unreadable and unusable in the event of a data breach. The platform is easy to use, access and greatly reduces IT administration. It includes a comprehensive audit trail guaranteeing non-repudiation and chain of custody.

## BENEFITS

### Secure File Sharing and Collaboration

Users can effortlessly share and collaborate with colleagues and an unlimited number of external stakeholders in total security, while also dramatically reducing the risk of human error.

### Cost Savings and Increased Productivity

Dekko helps organisations replace inefficient manual workflow processes, with a simple and highly secure digital solution that increases security, drives efficiency and dramatically reduces cost.

*Popular sharing and collaboration tools are not designed for security. The sharing of highly confidential information internally and externally places law firms at significant risk of ransomware attacks and data breaches.*

## AT A GLANCE

### Typical Challenges

- Ensuring the confidential sharing of large, highly sensitive files as they move around a complex business environment.
- Access to comprehensive audit trail and easy management of visibility and access controls.
- To communicate securely via video conferencing while sharing sensitive documents.

### How Dekko Helps

- Confidential file sharing with comprehensive audit trail.
- In platform document approval with unlimited e-signatures.
- Project groups with granular visibility control.
- Private chat and email.
- Web-based, end-to-end encrypted video conferencing.
